Modules

DBM5100: DIGITAL MANAGEMENT

DBM5100 – Digital Management	
ID	DBM5100
Study semester	1
Credits	9
Contact hours per week	6
Frequency	Each Winter Term
Courses	<ul style="list-style-type: none"> - DBM5101 IT Management (2 h per week, 3 Credits) - DBM5102 Digital Management (2 h per week, 3 Credits) - DBM5103 Digital Platforms (2 h per week, 3 Credits)
Requirements for participation	-
Kind of Examination / Duration of Examination	PLK (60 minutes) + PLP + PLR
Granting of credits	Pass of the written examination and academic assessment
Significance for final grade	Weighted by number of credits
Class Size	Max. 25 Students
Language	English
Duration of the module	1 Semester
Responsible person	Theobald, Elke
Lecturer	Theobald, Elke
Department	Computer Science, Business Administration
Attendance for other programs	-
Pedagogical Approach	Lecture with exercises, case studies and project work
Objectives	<p>The module conveys the basic knowledge in the context of digital management.</p> <p>The students know the relevant IT systems in digital management and their areas of application. They know the basics of IT architecture and IT service management. Students will be familiar with the special aspects and challenges of digital management. In particular, they are able to carry out requirements analyses in projects.</p> <p>They are familiar with the special features of platform economy, the business models and the mechanisms on platform markets and can apply this knowledge to new scenarios. Students will be able to apply digital management methods to given scenarios and assess the success factors and risks of the application scenarios. They can evaluate the scenarios by different perspectives and explain and communicate their solutions.</p> <p>Based on the competencies acquired in the prior bachelor, the module serves to broaden, but primarily intensify, comprehend,</p>

	<p>and critically reflect knowledge. Students will demonstrate the use and transfer of the knowledge obtained. They will also acquire communicative and collaborative competences in an intercultural setting.</p>
<p>Content</p>	<p><u>DBM5101 IT Management</u></p> <ul style="list-style-type: none"> • IT-Systems and Information Technology • IT Management and Governance / Compliance • Modern IT-Architecture, Cloud Computing, Data Lakes • IT-Services und IT Service Management • IT-Infrastructure Library (ITIL), ITIL Service Transition • IT Security • Contributions of the IT-Department to company strategy <p><u>DBM5102 Digital Management</u></p> <ul style="list-style-type: none"> • Digital Economics • Digital Transformation in- and outside companies • IT-based Business Process Optimization • Requirement Management in Digital Management • Challenges for Design, Implementation and Management of holistic IT-System-Infrastructures in a global and changing environment. <p><u>DBM5103 Digital Plattformen</u></p> <ul style="list-style-type: none"> • Digital business models / platform economy • Mechanisms of digital ecosystems • Direct and Indirect Network Effects • Competition on digital platforms • Strategic alignment of digital platforms
<p>Connection with other modules</p>	<p>This module forms the basis for all other modules in the program.</p>

DBM5200: MODERN SUSTAINABLE LEADERSHIP

DBM5200 – Modern Sustainable Leadership	
ID	DBM5200
Study semester	1
Credits	8
Contact hours per week	6
Frequency	Each winter term
Courses	<ul style="list-style-type: none"> - DBM5201 Change Management and Leadership (2 h per week, 3 Credits) - DBM5202 Sustainability and Interdisciplinarity in a Digital World (2 h per week, 3 Credits) - DBM5211 Training: Intercultural Management (2 h per week, 2 Credits)
Requirements for participation	-
Kind of Examination / Duration of Examination	DBM5201 and DBM5202: PLR + PLK (60 minutes) DBM5211: Intercultural Management - UPL
Granting of credits	Passing of the written examination and academic assessment
Significance for final grade	Weighted by number of credits
Class Size	Max. 24 students
Language	English
Duration of the module	1 Semester
Responsible person	Schmitz, Anja
Lecturer	Schmitz, Anja; Viere, Tobias
Department	Business Administration
Attendance for other programs	-
Pedagogical Approach	Lectures with exercises and case studies
Objectives	<p>Students have an overview of the fundamentals, current concepts, methods and instruments of change management, organizational development, and transformation design. In this context, students increase their awareness for global, gender and diversity issues and intercultural challenges of sustainable development, helps their understanding of the interdisciplinary character and requirements of achieving sustainability, and provides knowledge on managerial responses and approaches to achieve corporate sustainability.</p> <p>They can analyse business scenarios, to identify and understand the dependences and create general solutions for complex challenges.</p> <p>Based on the competencies acquired in the prior bachelor, the module serves to broaden, but primarily to intensify and comprehend knowledge. Students can critically reflect on the knowledge they have acquired, apply it to practical and scientific issues and</p>

	<p>develop it further. They will also acquire oral communicative competencies; the module also contributes to professionalism.</p>
<p>Content</p>	<p><u>DBM5201 Change Management and Leadership</u></p> <ul style="list-style-type: none"> • Change Management, Organizational Development, Organizational Transformation • Phases and architecture of change processes • Social-psychological dynamics and intervention tools • Importance of management and leadership in the digital transformation • Various leadership models • Leadership, gender, and diversity • Leadership of virtual / international teams <p><u>DBM5202 Sustainability in a Digital World</u></p> <ul style="list-style-type: none"> • Foundations of sustainable development • Global challenges of sustainable development, including biodiversity, climate change, and ecosystem pollution • Implications of sustainable development for business and management • Inter- and transdisciplinary approaches for achieving sustainability. • Business strategies, concepts, and instruments to achieve corporate sustainability. <p><u>DBM5211 Intercultural Management</u></p> <ul style="list-style-type: none"> • Reflection of the challenges in intercultural and diversity management • Case Studies and Team Simulations in intercultural and diverse teams
<p>Connection with other modules</p>	<p>This module forms the basis for all the advanced modules in the 2nd semester, especially the Business Project.</p>
<p>Literature</p>	<p><u>DBM5201 Change Management and Leadership</u></p> <ul style="list-style-type: none"> • Hayes, J. (2018). The theory and practice of change management (5. ed.). DBM5300: ETHICS AND LAW IN DIGITAL BUSINESS

DBM5300 – Ethics and Law in Digital Business	
ID	DBM5300
Study semester	2
Credits	6
Contact hours per week	4
Frequency	Each summer term
Courses	<ul style="list-style-type: none"> - DBM5301 Ethics in Digital Business (2 h per week, 3 Credits) - DBM5302 Law in Digital Business (2 h per week, 3 Credits)
Requirements for participation	-
Kind of Examination / Duration of Examination	PLR + PLH
Granting of credits	Passing of respective assignment
Significance for final grade	Weighted by number of credits
Class Size	Max. 24 students
Language	English
Duration of the module	1 Semester
Responsible person	Leroch, Martin; Kroschwald, Steffen
Lecturer	Leroch, Martin; Kroschwald, Steffen
Department	Economics, Law
Attendance for other programs	-
Pedagogical Approach	Lecture with seminaristic units
Objectives	<p>In this module, students learn about the essential ethical, social, and legal environment of the digital economy. They also learn to apply the corresponding methods and models to various cases and discuss societal consequences and impact of as well as on legal regulation. Students will access the state of literature and will deepen their knowledge independently. They reflect values and standards in business context, and they base their actions on ethical standards. They will reflect their learning in the context of practical application – such as in organisations and in interaction with legal experts from companies - and further research.</p> <p>Based on the competencies acquired in the prior bachelor's program, the module serves to expand, but primarily to intensify and comprehend knowledge. Students will demonstrate the use and transfer of the knowledge obtained. They can critically reflect on the knowledge they have acquired, apply it to practical and scientific issues and develop it further. They will also acquire communicative competences; it also strongly contributes to academic integrity and professionalism.</p>

<p>Content</p>	<p><u>DBM5301 Ethics in Digital Business</u></p> <ul style="list-style-type: none"> • Overview: What is ethics? • Classification: Individual and Business Ethics • Overview of relevant, selected ethical theories. • The role of incentive structures • Business Ethics in the Digital Economy • Structure and structural peculiarities of the digital economy. • Ethic: Gender and Diversity • Ethical consequences and consequences for ethics <p><u>DBM5302 Law in Digital Business</u></p> <ul style="list-style-type: none"> • Introduction to the law of digitalisation • Basics of the law of the exchange of (digital) performance, digital products, and digital contracts • Insight into functions of the IP-Law in digital societies • Selected Questions of regulation of (Information-) access and the law on competition in digital markets • Developments of platform law and regulation of social networks • Overview over data protection law
<p>Connection with other modules</p>	<p>This module deals with the ethical, legal, and societal impact of technology in the future as part of sustainable business development and therefore links also to module 1, 2 und 4</p>
<p>Literature</p>	<p><u>DBM5301 Ethics in Digital Business</u></p> <ul style="list-style-type: none"> • Christoph Bartneck, Christoph Lütge, Alan Wagner and Sean Welsh (2020), An Introduction to Ethics in Robotics and AI, Dordrecht: Springer 2020 • Christoph Lütge and Matthias Uhl (2021), Business Ethics: An Economically Informed Perspective, Oxford: Oxford University Press <p><u>DBM5302 Law in Digital Business (each in current edt.)</u></p> <ul style="list-style-type: none"> • Legal and law-tetxs IT- und Computerrecht, dtv. Beck-Texte • Specht-Riemenschneider / Werry / Werry (Hrsg.) Datenrecht in der Digitalisierung, ESV • Specht-Riemenschneider/Riemenschneider/Schneider, Internetrecht, Springer • Spindler/Schuster, Recht der elektronischen Medien, Kommentar, Beck • Taeger / Gabel, DSGVO, TTDSG, R&W • Current journal literature on beck-online.de, juris etc. • Andrej Savin, EU Internet Law, Elgar European Law series, Cheltenham/Northampton/Copenhagen 2020 • Alessandro Mantelero, Beyond Data - Human Rights, Ethical and Social Impact Assessment in AI, Wiesbaden 2022 • Felix Bieker, The Right to Data Protection, Individual and Structural Dimensions of Data Protection in EU Law, Wiesbaden 2022
<p>Workload</p>	<p>180 hours, thereof Contact time 60 hours (4 hours per week x 15) self-study 120 hours (for preparation of course and exam)</p>

DBM5400: DEVELOPMENT OF DIGITAL BUSINESS MODELS & PRODUCTS

DBM5400 – Development of Digital Business Models & Products	
ID	DBM5400
Study semester	2 Semester
Credits	7
Contact hours per week	4
Frequency	Each summer term
Courses	<ul style="list-style-type: none"> - DBM5401 Applied Data Science and Artificial Intelligence (2 hrs. per week, 4 Credits) - DBM5402 Digital Business Models and Digital Products (2 hrs. per week, 3 Credits)
Requirements for participation	-
Kind of Examination / Duration of Examination	PLP + PLK (60 minutes)
Granting of credits	Passing of the written examination and academic assessment
Significance for final grade	Weighted by number of credits
Class Size	Max. 24 Students
Language	English
Duration of the module	2 Semester
Responsible person	Handrich, Matthias
Lecturer	Handrich, Matthias
Department	Business Administration
Attendance for other programs	-
Pedagogical Approach	Lecture with exercise or seminar-based teaching
Objectives	<p>In the module, students learn how to use AI to identify trends in specific industries. Students will develop the algorithms for a technology trend radar using a Data Science Program (KNIME) and then also create an initial MVP of the tool using a dashboard program. Students learn how to develop digital business models and digital products and reflect the impact of the MVP for the business strategy. With the help of design thinking, they develop an initial idea, which is then tested by means of digital prototyping (wireframes, etc.).</p> <p>The goal is to deliver an MVP (Minimal Viable Product), including elaboration of further steps such as: necessary implementation steps, required budget, data and IT infrastructure requirement, privacy requirement, business case, marketing measures etc. The MVP will be evaluated as a case study in the lecture. After feedback, critical reflection, and improvement the MVP will be handed in together with the other contents as a group homework after the end of the lecture.</p> <p>The module serves to intensify and comprehend knowledge. Students will demonstrate the use and transfer of the knowledge</p>

	<p>obtained. They will be able to critically reflect on the related issues and contribute to academic innovation. They will also acquire communicative and collaborative competences by explaining, critical reflecting and defending the MVP.</p>
<p>Content</p>	<p><u>DBM5401: Business Development and Digital Products</u></p> <ul style="list-style-type: none"> • Introduction to business models (especially digital business models) • Introduction to digital products • Design Thinking Basics • Methods of (digital) prototyping • Creation of the MVP • Presentation of the MVP • Digital Product Development Basics • Creating budget, data and IT infrastructure requirements, data protection requirements, business case, marketing measures • Consulting for Business Development <p><u>DBM5402: Applied Data Science and AI</u></p> <ul style="list-style-type: none"> • Introduction to AI and Data Science • Data Science process (data collection, data preparation, data exploration, feature engineering, model selection, model training, model evaluation and adaptation) • Identification of trends using AI • Introduction to KNIME • Building the dashboard for the tool in KNIME
<p>Connection with other modules</p>	<p>This module is based on Modul 1, 2, 5 and 6.</p>
<p>Literature</p>	<p><u>DBM5401: Data Science and AI</u></p> <ul style="list-style-type: none"> • KNIME Quickstart Guide: https://docs.knime.com/2019-06/analytics_platform_quickstart_guide/analytics_platform_quickstart_guide.pdf • Melcher and Silipo (2020) Codeless Deep Learning with KNIME: Build, train, and deploy various deep neural network architectures using KNIME Analytics Platform <p><u>DBM5402: Digital Business Models and Digital Products</u></p> <ul style="list-style-type: none"> • Kotorov (2020) Data-Driven Business Models for the Digital Economy • Osterwalder and Pigneur (2010) Business Model Generation: A Handbook for Visionaries, Game Changers, and Challengers • Wirtz (2021) Digital Business and Electronic Commerce: Strategy, Business Models and Technology • Weill, P., & Woerner, S. (2018). What's your digital business model?: six questions to help you build the next-generation enterprise. Harvard Business Press.
<p>Workload</p>	<p>210 hours, thereof Contact time 60 hours (4 hours per week x 15) self-study 150 hours (for preparation of course, project and exam)</p>

DBM5500: AGILE PROJECT AND PROCESS MANAGEMENT

DBM5500– Agile Project and Process Management	
ID	DBM5500
Study semester	2
Credits	7
Contact hours per week	4
Frequency	Each Summer Term
Courses	<ul style="list-style-type: none"> - DBM5501 Agile Project Management (2h per week, 3 Credits) - DBM5502 Process Management (2h per week, 3 Credits) - Trainings (1h per week / 1 Credit of one of the following): <ul style="list-style-type: none"> - DBM5511 Training: Tools and Methods for Project Management - DBM5512 Training Design with Dashboard Tool - DBM5513 Webanalytics (1h per week)
Requirements for participation	-
Kind of Examination / Duration of Examination	<ul style="list-style-type: none"> - DBM5501 Agile Project Management: PLP - DBM5502 Process Management: PLK (60 minutes) - DBM5511/12/13: Training UPL
Granting of credits	In each case: Passing of the respective examination
Significance for final grade	The module is weighted in the final master's grade.
Class Size	Max. 24 students
Language	English
Duration of the module	1 Semester
Responsible person	Theobald, Elke
Lecturer	Handrich, Matthias; Schätter, Frank; N.N.
Department	Business Management
Attendance for other programs	-
Pedagogical Approach	Lecture with exercise or seminar-based teaching
Objectives	<p>In the module, students get familiarity and broaden their knowledge with application-oriented methods of project management and digital tools to support them in digital projects. They comprehend their knowledge and reflect critically on the related issues.</p> <p>They can use and transfer it to include modeling and conceptual competence for process modeling, dashboard design or google analytics. They can apply the methods and instruments to new, unknown matters and to critically and dynamically reflect the right choice of methods.</p>
Content	<p><u>DBM5501: Agile Project Management</u></p> <ul style="list-style-type: none"> • Principles of project management waterfall

	<ul style="list-style-type: none"> • Introduction to Agile Project Management and SCRUM • Waterfall vs. agile • Practicing the SCRUM Flow • Dealing with disruptions • Moving forward with Agile Project Management and SCRUM <p><u>DBM5502: Process Management</u></p> <ul style="list-style-type: none"> • Basic concepts and principles of business process management • Digital transformation of companies: challenges and strategies • Methods and tools to define, implement, and improve end-to-end processes of companies. • Selected process modelling languages. • Basics of big data and data mining for business process management • Mapping and improvement of business processes via process mining <p><u>DBM5511 / 12 / 13: Trainings</u></p> <ul style="list-style-type: none"> • Introduction in Tools and Methods (e.g. Jira) • Self-Learning Certificates (e.g. Google Academy) • Trainings e.g. Jira, Google Data Studio, Google Analytics, PowerBI, Qlik, Tableau, MS Project, Trello etc.
<p>Connection with other modules</p>	<p>The module builds on modules 1 and 2 by providing concrete project management skills for digital business, and process optimization. It forms the basis for modules 7, 8 and 9.</p>
<p>Literature</p>	<p><u>DBM5501: Agile Project Management</u></p> <ul style="list-style-type: none"> • Schwaber, Ken, Agile Project Management with Scrum. Microsoft Press 2004. • Cohn Mike, User Stories Applied. Addison-Wesley 2005. • Cohn Mike, Agile Estimating and Planning. DBM5600: RESEARCH METHODS, ALGORITHMS AND DATA STRUCTURES

DBM5600 – Research Methods, Algorithms and Data Structures	
ID	DBM5600
Study semester	1
Credits	7
Contact hours per week	4
Frequency	Winter term (each course once a year)
Courses	<ul style="list-style-type: none"> - DBM5601: Research Methods (2 h per week, 3 Credits) - DBM5602: Algorithms and Data Structures (2 h per week, 4 Credits)
Requirements for participation	-
Kind of Examination / Duration of Examination	PLP + PLK (90 minutes)
Granting of credits	In each case: Passing of the respective examinations
Significance for final grade	The module is weighted in the final master's grade.
Class Size	Max. 24 Students
Language	English
Duration of the module	1
Responsible person	Kuhlenkasper, Torben
Lecturer	Kuhlenkasper, Torben
Department	Quantitative methods
Attendance for other programs	-
Pedagogical Approach	Lecture with trainings and project work
Objectives	<p>The students should understand different scientific research designs and methods and learn how to set up a research study. The participants will deepen their knowledge in research design and be able to conduct qualitative research and critically reflect on their research method. They can analyse a research setting, to select an adequate research method and to apply the research method to new research questions.</p> <p>The participants learn how to think analytically and introduce them into data structure and algorithms. This is extended by current approaches in artificial intelligence and machine learning. The participants will deepen their analytical competences and get a comprehensive knowledge of the subjects. They will transfer their knowledge by project work.</p> <p>The module serves to broaden, intensify, and comprehend knowledge. Students will demonstrate the use and transfer of the knowledge obtained. They will also acquire communicative and collaborative competences. The module also contributes to academic integrity and professionalism.</p>

<p>Content</p>	<p><u>DBM5601 Research Methods</u></p> <ul style="list-style-type: none"> • Overview Research Methods • Principles of good research • How to design Research Instruments • Designing an online questionnaire • How to do qualitative Research • Project qualitative Research <p><u>DBM5602 Algorithms and Data Structures</u></p> <ul style="list-style-type: none"> • Defining and describing a data structure • Arrays and Linked Lists • Stacks, Queues, and sorted sequences • Search Algorithms • Sort Algorithms • Recursion • Generic Approaches to Optimization
<p>Connection with other modules</p>	<p>This module forms the basis for modules 8 and 10 as well as certain in-depth electives (predictive analytics) from module 9. Likewise, it provides analysis skills for the scope with data structures from module 4.</p>
<p>Literature</p>	<p><u>DBM5601 Research Methods</u></p> <ul style="list-style-type: none"> • Breuer, F., & Schreier, M. (2007). DBM5650: DATA ANALYTICS WITH R

DBM5650 – Data Analytics with R	
ID	DBM5650
Study semester	1
Credits	6
Contact hours per week	4
Frequency	Winter term (each course once a year)
Courses	-
Requirements for participation	-
Kind of Examination / Duration of Examination	PLP+PLK (60 Min.)
Granting of credits	In each case: Passing of the respective examinations
Significance for final grade	The module is weighted in the final master's grade.
Class Size	Max. 24 Students
Language	English
Duration of the module	1
Responsible person	Kuhlenkasper, Torben
Lecturer	Kuhlenkasper, Torben
Department	Quantitative methods
Attendance for other programs	-
Pedagogical Approach	Lecture with trainings and project work
Objectives	<p>Based on the competencies acquired in the prior bachelor, students will deepen their analytical competences and get a comprehensive knowledge of the subjects. Students will demonstrate the use and transfer of the knowledge obtained. They can apply their knowledge to new scenarios and data sets.</p> <p>They can reflect the use of methods and can interpret the results and derive correct conclusions. They will also acquire communicative and collaborative competences. The module also enables students to engage in academic innovation.</p>
Content	<ul style="list-style-type: none"> • Introduction to multivariate statistics • Introduction to the software R • Fundamental confirmative statistics • Multiple Linear Regression Models • Binary Choice Models • Analysis of Variance • Analysis of Contingency • Cluster Analysis • Explorative Factor Analysis

Connection with other modules	This module forms the basis for modules 8 and 10 as well as certain in-depth electives (predictive analytics) from module 9.
Literature	<ul style="list-style-type: none"> • Handl, A. / Kuhlenskasper, T.: Multivariate Analysemethoden. 3rd ed., Springer. • Fahrmeier, L. et al.: Regression – Models, Methods and Applications, Springer.
Workload	180 hours, thereof Contact time 60 hours (4 hours per week x 15) self-study 120 hours (for preparation of course and project).
Keywords	Research Methods, Qualitative Research, Regression, Time Series, Multivariate Statistics, Duration Analysis, ANOVA, Cluster Analysis, Factor Analysis, R

DBM5700: BUSINESS PROJECT IN DIGITAL BUSINESS MANAGEMENT

DBM5700 – Business Project in Digital Business Management	
ID	DBM5700
Study semester	2
Credits	10
Contact hours per week	2
Frequency	Each Summer Term
Courses	-
Requirements for participation	-
Prüfungsart /-dauer	PLP
Granting of credits	Passing the exam
Significance for final grade	The module is weighted with its credits in the master's final grade
Class Size	Maximum 7 students per team
Language	English
Duration of the module	1 Semester
Responsible person	Handrich, Matthias
Lecturer	Handrich, Matthias
Department	Business Administration
Attendance for other programs	-
Pedagogical Approach	Application-oriented research/practice project
Objectives	<p>Students apply research methods and knowledge in the field of digital business to specific practical issues. They define and realize a project (research project or application-oriented project with a partner from practice, e.g. company or institute) with practical relevance in compliance with the principles of good scientific practice.</p> <p>The module thus serves knowledge intensification and comprehension. It primarily serves the use and transfer of knowledge and academic innovation. They identify and define challenges in digital projects and break down complex problems into individual aspects. They evaluate alternative courses of action, considering economic framework conditions. They select possible courses of action and implement them. It also contributes to communication and collaborative competencies by presenting the results in front of practice partners.</p>

Content	<ul style="list-style-type: none"> • Development and operationalization of a research question and design of an adequate research design • Conception, implementation and evaluation of data or process analysis or design of algorithms • Planning of required resources • Data or process analysis, e.g. with SPSS, R, Python • Interpretation of results, derivation of recommendations for action, presentation and report writing • Simple explanation of complex issues / storytelling
Connection with other modules	The module builds on all lectures from 1 Semester and prepares for module 9.
Literature	Depending on the topic, the syllabus will be communicated in a project-specific manner.
Workload	In addition to the 2 x 15 = 30 h attendance time, students are expected to spend another 270 h for preparation and follow-up, independent literature study, processing of the practical or research project, presentations, and the research report.
Sonstiges	The examination is generally conducted in the form of teamwork and project presentation / documentation in groups of up to 7 students.
Keywords	Research Project, Applied Project, Reporting, Digital Business Project

DBM6100: ELECTIVES

DBM6100 – Electives	
ID	DBM6100
Study semester	3
Credits	9
Contact hours per week	6
Frequency	Each Winter Term
Courses	<p>Electives (choose three courses, each with 2 contact hours per week and 3 credits):</p> <ul style="list-style-type: none"> • DBM6101 Data Science with Python • DBM6102 Big Data Analytics • DBM6103 Application in Supply Chain Simulations • DBM6104 Customer Experience Management • DBM6105 New digital Work • DBM6106 Dive in Technologies • DBM6107 Predictive Analytics • IDS5010 Interdisciplinary Studies
Requirements for participation	-
Kind of Examination / Duration of Examination	<ul style="list-style-type: none"> • DBM6101: PLP/PLK (45 minutes) • DBM6102: PLP • DBM6103: PLP • DBM6104: PLR • DBM6105: PLR • DBM6106: PLH • DBM6107: PLK (60 minutes) • IDS5010: Depending on course offered
Granting of credits	Credits are granted for the individual component courses based on the respective exams.
Significance for final grade	Weighted by number of credits
Class Size	Max. 40 Studierende
Language	English
Duration of the module	1 Semester
Responsible person	Theobald, Elke
Lecturer	Merz, Yasmin
Department	Business Administration
Pedagogical Approach	Depending on elective: lecture with trainings, seminar format, project work
Applicability in other study programs	Individual courses can also be taken in and through other degree programs.
Objectives	The module serves to intensify and comprehend knowledge. Students will demonstrate the use and transfer of the knowledge obtained. Students will also acquire communicative

	<p>competencies. The module allows for focusing on individual interests.</p>
<p>Content</p>	<p><u>DBM6101 Data Science with Python</u></p> <p>This course offers a hands-on approach to artificial intelligence (AI). Students will learn how to process (retrieve, clean and pipeline) data to detect patterns and to forecast future behaviors. The application of machine learning methods like Random Forests, Gradient Boosting and neural networks on real world datasets is a key aspect of this course. This includes preprocessing of data, model selection, model calibration and evaluation.</p> <ul style="list-style-type: none"> • Part 1: Data Processing <ul style="list-style-type: none"> ○ Introduction to Python ○ Discussion of important libraries in Python (Numpy, Pandas, Matplotlib, Plotly,..) ○ Discussion and application of data literacy & data structures in Python <ul style="list-style-type: none"> ▪ Loading & retrieving bulk data ▪ Preprocessing and cleansing loaded data. ▪ Methods for data visualization • Part 2: Machine Learning <ul style="list-style-type: none"> ○ Algorithms (classification, regression in variants, decision trees and random forests, clustering, neural networks, deep learning) ○ Introduction and application of important machine learning frameworks (scikit-learn, keras, and TensorFlow), including model training, model evaluation and hyperparameter tuning content. <p><u>DBM6102 Big Data Analytics</u></p> <ul style="list-style-type: none"> • machine learning (ML) • Implementing a machine learning pipeline using Cloud Services • Using managed Cloud services for forecasting, computer vision, and natural language processing <p><u>DBM6103 Application in Supply Chain Simulations</u></p> <ul style="list-style-type: none"> • Supply chain management and business process management. • Management levels and decision problems • Logistics structures and network planning • Supply chain simulation and optimization based on operations research and management science. • Application of selected decision problems based on IT tools (e.g., warehouse location problems) Supply chain simulation and optimization use case. <p><u>DBM6104 Customer Experience Management (CEM)</u></p> <ul style="list-style-type: none"> • Basics, terms, and models of CEM, customer loyalty, customer value • Measurement and metrics, CEM in times of large data volumes • Management of customer loyalty, customer experience and customer value • Application of the basics to case studies <p><u>DBM6105 New Digital Work</u></p>

	<ul style="list-style-type: none"> • New challenges to individuals, teams, and organizations with regards to digital work and the digital workplace • Current trends in digital work and organizational design • Effects of digital work on individuals, teams, and organizations • Effects of the Digital Transformation on HR Management, employee experience (e.g. on how organizations recruit, retain, and support and people), individual and organizational learning as well as organizational culture. • Explanatory concepts from behavioral sciences as the foundation of sustainable work and careers in the digital work environment <p><u>DBM6106 Content Dive in Technologies</u></p> <ul style="list-style-type: none"> • Methods in and Instruments for Technologies Evaluation, e.g. TAM • Introduction to different current technologies and their application in companies, e.g. Blockchain, Digital Twins, IoT, RPA • Assessments for the different current technologies <p><u>DBM6107: Predictive Analytics</u></p> <ul style="list-style-type: none"> • Time Series Analyses • Duration Modelling • Classification Trees
<p>Connection with other modules</p>	<p>The module builds on modules 1, 2, 3 and 4. It prepares certain thesis topics in module 9.</p>

Workload	The total workload of the module is 270 h with 90h per elective. The workload of the individual electives is specified in the syllabus of the respective course.
Sonstiges	At least three courses are offered. The courses listed are not exhaustive but may be augmented or changed over time. The university may offer additional / alternative courses. An individual course (IDS5010) can also be taken in a master's degree program of a different school of the university (engineering, design).

THE6120: THESIS

THE6120 – Thesis	
ID	THE6120
Study semester	3
Credits	21
Contact hours per week	0
Frequency	Each semester
Courses	THE6120 Master Thesis
Requirements for participation	-
Kind of Examination / Duration of Examination	PLT
Granting of credits	Academic assessment of the thesis
Significance for final grade	Weighted by number of credits
Class Size	none
Language	English
Duration of the module	4 months
Responsible person	Boßlau, Mario (Program Director)
Lecturer	all professors at the Business School can act as supervisors
Department	Digital Management
Pedagogical Approach	Thesis Writing
Verwendbarkeit in anderen Studiengängen	-
Objectives	<p>Students work on a topic of their own choice from a research field of the program's focus. They learn to identify current challenges in science and / or practice, to formulate relevant questions and to work on them independently. They structure their work independently in different contexts (practice, science, or research).</p> <p>By the end of the thesis, the participants shall be capable of:</p> <ul style="list-style-type: none"> • independently solving a complex scientific research question based upon competent use and application of suitable research methods contributing to academic innovation. • review scientific literature or other resources. • write comprehensive research paper. • and demonstrate their professionalism in their field of studies and their academic integrity. <p>The module fosters the comprehension of knowledge. It primarily serves to develop competencies in the use and transfer of knowledge and academic innovation. It also contributes to professionalism and written communication skills.</p>

<p>Content</p>	<ul style="list-style-type: none"> • Scientific qualification • Management and problem-solving techniques in a real-life environment • Managerial decision making • Cooperation with a company, a business-related institution or in a research area of a full-time faculty member <p>Formally, the thesis will be written in paper-based format. An empirical oriented or a data analytic oriented or a practice-oriented topic in cooperation with a company are strongly recommended. The length should be 30,000 words. The language must be English. The majority (80 %) of the literature should be scientific papers.</p>
<p>Connection with other modules</p>	<p>none</p>
