Summary

Corporate finance represents a special area of finance, which focusses on a firm's sources of funding, capital structure decisions, managerial actions to increase the value of the firm, and tools and analyses that can be used to allocate financial resources in the most beneficial way. The primary goal of corporate finance is to maximize or increase shareholder value. Investment banks often help firms in carrying out these activities, as firms frequently lack relevant skills or abilities to do so on their own.

The goal of the course "Investment Banking and Corporate Finance" is to develop students with the analytical skill-set for making corporate finance decisions in practice from the perspective of shareholder value creation.

The course focusses on the areas of corporate finance from an investment banking perspective. By doing so, we will look into three key departments of investment banks: M&A, equity capital markets and debt capital markets, and try to understand which functional expertise one needs to work there and try to acquire these capabilities in this course. Many of these capabilities however are also relevant for a successful job entry in corporate CFO functions of firms (like treasury, corporate development, strategy, accounting, controlling).

Having completed this course, students should:

- have a general overview about the goals and main areas of corporate finance.
- understand how investment banks can help in achieving these goals.
- have a sound understanding of how to assess the value creation potential of various investment projects.
- be able to approximate the value of a firm from an income, market and cost perspective.
- have an in-depth understanding of long-term financing via equity and debts and their related costs.
- be familiar how capital structure choices influence the value of a firm.
- understand special topics in Corporate Finance like Mergers & Acquisitions, corporate restructurings, and LBOs.

Course prerequisites

- **General financial accounting and financial management skills**: Students should be familiar with the general content and structure of financial statements (balance sheet, profit and loss statement, cash flow statement) and financing sources of firms.
- Capital budgeting skills: Students should be familiar with basic capital budgeting concepts (in particular net present value and internal rate of return).

Outline of the Course

Key areas:	Topics:
