Summary

Determining the value of a firm or a firm's securities together with understanding relevant value drivers represent essential capabilities of key decision makers in firms. Therefore, the course "Applied Corporate Valuation" focusses on this essential functional capability to provide students with the know-how of mastering valuations in a business setting.

Generally, the objective of this course is to develop the intuition, tools and skill set to value companies and their outstanding securities. The principal focus will be on the valuation of equity in public and private corporations. A strong emphasis will be placed on the application of these concepts in real-world situations.

The class discussions will cover the analysis of past financial performance and the projections of future performance. We will examine the estimation of cash flows and discount rates in the treatment of discounted cash flow valuation models, followed by the analysis of the application of various enterprise and equity value multiples (such as EV/EBITDA, EV/EBIT, P/B, P/E). We will also examine a number of additional valuation issues within the context of mergers and acquisitions, leveraged buyouts, and other special situations.

As this course builds upon skills developed in previous finance and accounting courses, students should be familiar in the areas of financial statement analysis and capital budgeting. In addition, they should be familiar with introductory concepts in statistics. Important concepts, however, will be revisited in class. This course is designed for students with little or no previous work experience in valuation.

Course prerequisites

- **General financial accounting and financial management skills:** Students should be familiar with the general content and structure of financial statements (balance sheet, profit and loss statement, cash flow statement) and financing sources of firms.
- **Capital budgeting skills:** Students should be familiar with basic capital budgeting concepts (in particular net present value and internal rate of return).
- **Basic Excel skills:** Students should be familiar with the main functionalities of Microsoft Excel.

Outline of the Course

Main course topics:

1. Course introduction
2. Overview on relevant valuation approaches
3. Discounted cash flow approaches
 - Cost of capital
 - Relevant cash flows
 - Free cash flow to the firm
 - Free cash flow to equity

4. Relative valuation approaches
 - Trading multiples and their determinants
 - Transaction multiples and takeover premiums
5. Asset based valuation approaches
6. Special topics in valuation

Course Intended Learning Outcomes and their Contribution to Program Intended Learning Outcomes / Program Goals

Teaching and Learning Approach

The course consists of two main elements:

(1) ***Interactive lectures with discussion:***

The first part of the course focusses on the principles of corporate valuation. This is accomplished primarily by a lecture-style approach including class discussions and exercises. Preparation based upon suggested basic readings and continuing active class participation throughout the term is expected. The slides and additional materials for each session will be uploaded to the e-learning platform. The lectures cover the main course topics as outlined below.

(2) ***Preparation of a valuation report on a company to be chosen by the students:***

Based upon the knowledge acquired in the first part of the course, students have to value a public firm of their choice to come up with an equity value of the same. This should be done by the application of an income-based and relative valuation model. Students are encouraged to give a buy-, hold- or sell-recommendation based on their results in a 6-page summary document.

Literature and Course Materials

Basic Reading:

Damodaran, A., *Investment Valuation: Tools and Techniques for Determining the Value of any Asset*, latest edition, John Wiley & Sons.

Koller, T., Goedhart, M., Wessels, D., *Valuation, Measuring and Managing the Value of Companies*, latest edition, John Wiley & Sons.

Additional Readings:

Rosenbaum, J., Pearl, J., *Investment Banking: Valuation, Leveraged Buyouts, and Mergers & Acquisitions*, latest edition, John Wiley & Sons.

Slides, as well as other course and background material will be uploaded to Moodle throughout the semester.

Assessment

The grade for the course “Applied Corporate Valuation” is based upon:

(1) a valuation project on a company to be chosen by the students [individual assignment] (90%).

The valuation project consists of (i) a valuation model in Microsoft Excel and (ii) a (max.) 8-page valuation report (handed in as pdf at the end of the semester). The valuation report should be structured in the following sections:

- 1) Investment highlights (executive summary)
- 2) Business plan description
- 3) Valuation results (Income approach)
- 4) Valuation results (Market approach)
- 5) Investment recommendation

(2) a mid-term quiz [individual assignment] (10%).

Grades will range between 1.0 (very good) and 5.0 (fail), in 0.3 and 0.7 steps.

- 1.0 Very good, a performance significantly above the average.
- 2.0 Good, an above average performance.
- 3.0 Satisfactory, an average performance.
- 4.0 Adequate, a below average performance with noticeable shortcomings.
- 5.0 Fail, an unacceptable performance.

Schedule

See LSF for details.
